Product Category Rules (PCR): 2019:14 Version 1.11, 2021-02-05, Construction Products and
CPC 54 Construction Services, EN 15804:2012 + A2:2019 Sustainability of Construction Works

Independent third-party verification of the declaration and data, according to ISO 14025:2006:

EPD process certification

EPD verification ☒

Third party verifier: Prof. Vladimír Kocí

Approved by: The International EPD® System

Procedure for follow-up of data during EPD validity involves third party verifier:

Yes

No ☒

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

About the Company

DALSAN is an ineradicable company almost as old as Turkish Republic, commenced the fabrication of plaster in industrial level for our country that plaster was formerly used as a healthy, durable and material of construction individually since 9000's B.C. in Anatolia.

DALSAN has developed first workshop establishment from fabrication of teeth plaster by baking and pestling them in neighborhood bakery oven, commenced on 1932.

Today, DALSAN Alçı has fabrication capacity of more then 1 million ton of gypsum and cement based products by using modern and high technology in facilities location in Gebze and Ankara. Additionally, galvanized profiles used in drywall systems are also fabricated in these facilities.

DALSAN increases the share in market by the aim of true and qualified product delivery to customers as well as qualified and honesty based fabrication.

DALSAN succeeded to become a constantly learning institution by caring and monitoring tendencies, expectations, different acknowledges of sector. Importance given on learning among structure of company provides a basis to variety of product range and meet demands of consumers effectively. Continuous learning habit dominant in DALSAN accompanied with information and talent constitutes the most important dynamic of a better and eco-friendly fabrication.

DALSAN is a manufacturer with high export potential due to its location. Today, DALSAN exports to almost 70 countries in the world from both Gebze and Ankara plants.

DALSAN certifies that the goods and services to its customers are supplied with the internationally accepted ISO 9001 Quality Management System. Together with ISO 9001 Quality Management, DALSAN follows and applies ISO 14001 Environmental Management System.

Prior aim of DALSAN for the future is, to be on the top of the line in the technological competition made in plaster and plaster board fabrication by developing the fabrication more and more. Under favour of accumulation of knowledge and importance given to research and development studies, we offer all the needs of a construction from floor to roof.

Product Information

Galvanized Metal Framing ceiling and wall profiles are galvanized steel profiles used in the construction of plasterboard partition walls, dry-linings and suspended ceiling systems. Puncto ceiling and wall profiles are highly compatible with plasterboard and help with flexibility of installation. Corner profiles are thin galvanized steel profiles used in the corners of plasterboard partition walls and suspended ceilings systems. Corner profiles are also used for maintaining the perpendicularity of wall corners in gypsum plaster applications, and for increasing resistance against shocks.

Applications

Houses, office and administration buildings, business and shopping centers, hotels, repair and renewal works.

Composition

Dalsan **Galvanized Metal Framing** is produced from steel.

After production, the final products are packed with co-strap.

Raw Material	% by weight
Steel	90-99
Galvanize	0-10

Technical Specifications

Propoerties	Unit	Standard	Value
Galvanization	-	EN 14195/ EN 14353/ ASTM C645	Z100/Z120/Z140/Z275
Thickness	mm	EN 14195/ EN 14353/ ASTM C645	0.3-2.0

LCA Information

Declared Unit 1 kg of **Galvanized Metal Framing**

Time Representativeness 2020

Database(s) and LCA Software Used Ecoinvent 3.6, SimaPro 9.1

The inventory for the LCA study is based on the 2020 production figures for **Galvanized Metal Framing** by DALSAN production plants in Gebze, Turkey.

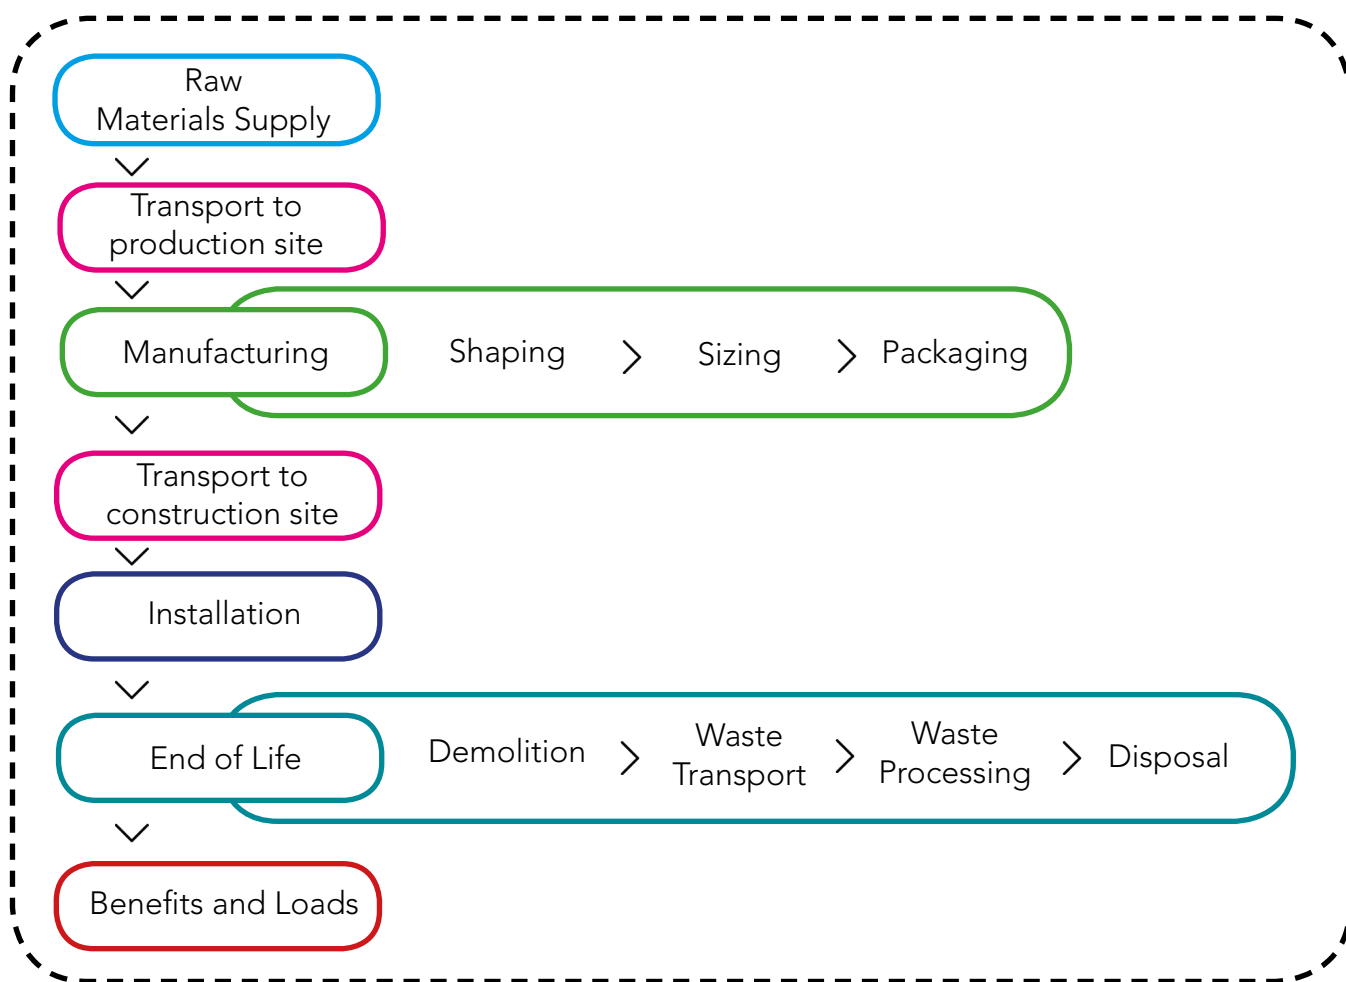

This EPD's system boundary is cradle to grave. The results of the LCA with the indicators as per EPD requirement are given in the following tables for product manufacture (A1, A2, A3), construction process stage (A4, A5), end of life stage (C1, C2, C3, C4) and benefits and load stage (D).

The system boundaries in tabular form for all modules are shown in the table above.

Product Stage			Construction Process Stage		Use Stage							End of Life Stage				Benefits and Loads
Raw Material Supply	Transport	Manufacturing	Transport	Construction Installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational Energy Use	Operational Water Use	Deconstruction, demolition	Transport	Waste Processing	Disposal	Future reuse, recycling or energy recovery potentials
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	ND	ND	ND	ND	ND	ND	ND	X	X	X	X	X

X = Included in LCA, ND = Not Declared

System Boundary

----- System Boundary

A1: Raw Material Supply

Production starts with raw materials mainly locally sourced but some transported from other parts of the world. 'Raw material supply' includes raw material extraction and pre-treatment processes before production.

A2: Transportation to Production Site

Transport is relevant for delivery of raw materials and other materials to the plant and the transport of materials within the plant. Transport of raw materials to production site is taken as the weight average values for transport from raw materials supplier in 2020.

A3: Manufacturing

'Manufacturing' starts with shaping and sizing of hot-dip galvanized steel coil. The profiles, which are brought to the appropriate dimensions according to the customer's demand, are packaged and shipped. Only electric energy is consumed during the manufacturing. Part of the electrical energy used is provided by solar panels.

A4: Transport From the Gate to the Site

Transport of final product to construction site is taken as the weight average values for transport to customers in 2020. According to DALSAN sales figures, the transportation distance is assumed as 350 km roadway with a lorry.

A5: Installation

There is no energy use during installation, manpower and some tools are sufficient.

C1 : Deconstruction and Demolition

There is no energy use during uninstallation, manpower and some tools are sufficient.

C2 : Transport

This stage includes the transportation of the discarded profiles to final disposal. Average distance from demolition site to waste processing site for final disposal is assumed to be 100 km.

C3 : Waste Processing

If the wastes are going to landfill or recycling, there is no need for any waste process.

C4 : Disposal

85% recycling scenario has been assumed. It has been accepted that the remaining wastes cannot be collected from the source and go to landfills.

D : Benefits and Loads

In this stage, recycling of steels were calculated specified in the disposal stage.

More Information

Allocations

Water consumption, energy consumption and raw material transportation were weighted according to 2020 production figures.

In addition, hazardous and non-hazardous waste amounts were also allocated from the 2020 total waste generation.

Cut-Off Criteria

1% cut-off applied. Data for elementary flows to and from the product system contributing to a minimum of 99% of the declared environmental impacts have been included.

REACH Regulation

No substances included in the Candidate List of Substances of Very High Concern for authorization under the REACH regulations are present in this product either above the threshold for registration with the European Chemicals Agency or above 0.1% (wt/wt).

LCA Modelling, Calculation and Data Quality

The results of the LCA with the indicators as per EPD requirement are given in the LCA result tables. All energy calculations were obtained using Cumulative Energy Demand (LHV) methodology, while fresh water use is calculated with selected inventory flows in SimaPro according to the PCR.

There are no co-product allocations within the LCA study underlying this EPD.

The SimaPro 9.1 LCA software and the Ecoinvent 3.6 LCA database were used to calculate the environmental impacts. The regional energy datasets were used for all energy calculations.

Geographical Scope

The geographical scope of this EPD is global.

Legend	A1: Raw Material Supply, A2: Transport, A3: Manufacturing, A1-A3: Sum of A1, A2, and A3, A4: Transport to Site, A5: Installation, C1: De-Construction, C2: Waste Transport, C3: Waste Processing, C4: Disposal, D: Benefits and Loads Beyond the System Boundary.								
Disclaimer 1	This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.								
Disclaimer 2	The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.								
*Disclaimer 3	EP-freshwater: This indicator has been calculated as "kg P eq" as required in the characterization model. (EUTREND model, Struijs et al, 2009b, as implemented in ReCiPe; http://eplca.jrc.ec.europa.eu/LCDN/developerEF.xhtml)
